## Vorwort der Schweizerischen Geotechnischen Kommission.

Der zweite Nachtrag zu «Chemismus schweizerischer Gesteine» setzt die 1930 mit Lieferung 14 begonnene und 1942 mit Lieferung 20 fortgesetzte tabellarische Zusammenstellung der «vollständigen» Analysen von Gesteinen und Mineralien der Schweiz fort. Teil A (mit 464 Analysen) ergänzt die Sammlung der Gesteinsanalysen für die Jahre 1942 bis 1955, Teil B umfaßt die Analysen (97) der Mineralien des gleichen Zeitabschnittes mit einigen Nachträgen.

Die Zusammenstellungen schließen sich in Auswahl und Anordnung im wesentlichen an die früheren Publikationen an. Neu ist die Berechnung der Gesteinsanalysen auf Kationenprozente. Wie früher wurde bei den Gesteinsanalysen an den Stellen etwas über das Schweizergebiet hinausgegriffen, wo es der Zusammenhänge wegen als wünschenswert erschien (Val d'Ossola, Luganer Porphyrgebiet, Val Mera).

Es war vorgesehen, die Tabellen der vollständigen Analysen wie in Lieferung 14 durch unvollständige chemische Daten von schweizerischen Gesteinen oder Mineralien zu ergänzen. Die Zusammenstellung und Veröffentlichung solcher mit ganz verschiedenen Methoden und Genauigkeitsanforderungen gewonnenen Daten erwies sich jedoch als nicht zweckmäßig, so daß beschlossen wurde, sich auf ein Verzeichnis neuerer Literatur mit wesentlicheren unvollständigen Analysendaten von Gesteinen zu beschränken. Hier wurden auch Publikationen aufgenommen, die spektrographisch ermittelte halbquantitative Bestimmungen von Spurenelementen enthalten.

Der Schweizerischen Geologischen Kommission, sowie den Mineralogisch-Petrographischen Hochschulinstituten der Schweiz sei bestens dafür gedankt, daß sie gestatteten, anderweitig noch nicht publizierte Analysen von Gesteinen und Mineralien aufzunehmen. Wertvolle Bereicherungen erfuhren die Tabellen durch Datenübermittlung von den Herren Prof. P. Bearth, Dr. R. Gees, Dr. F. Hofmann, Dr. Th. Hügi, Prof. H. Huttenlocher, Prof. J. Jakob, Dr. H. Ledermann, dipl. ing. petr. J. Meyer, H. R. Mülli, Prof. E. Niggli, Prof. M. Reinhard, J. Weber, Prof. E. Wenk.

Die Zusammenstellung der Analysen, die mühevollen Neuberechnungen und Kontrollen erfolgten zur Hauptsache durch Fräulein V. Jenny. An der Berechnung der Kationenprozente waren die Herren Prof. E. Wenk, H. Kapp, dipl. ing. petr. K. Stucky und dipl. ing. petr. H. Zweifel beteiligt. Ihnen sei für ihre große Arbeit vielmals gedankt.

Die vorliegende Zusammenstellung wurde in der Sitzung der Kommission vom 27. November 1954 zur Veröffentlichung entgegengenommen. Die Kommission möchte dem Schweizerischen Nationalfonds zur Förderung der wissenschaftlichen Forschung den besten Dank für seinen finanziellen Beitrag an die Druckkosten aussprechen.

Für den Inhalt der Tabellen sind die Autoren allein verantwortlich.

Zürich, im März 1956.

Für die Schweizerische Geotechnische Kommission  
Der Präsident: Prof. Dr. F. de Quervain

## Teil A.

# Tabellarische Zusammenstellung der Gesteinsanalysen von 1942—1955, nebst Nachträgen.

### Einleitung.

Die Gliederung der Analysenzusammenstellung erfolgte wie in den Lieferungen 14 und 20 nach den geologischen Einheiten des Landes. Eine Ausnahme wurde nur bei den quartären Gesteinen aller Regionen gemacht, die zusammen mit einem Anhang (Meteorite, Artefakte) in einem Abschnitt zusammengefaßt wurden. Bei der petrographischen Unterteilung der einzelnen Gebiete wurde im allgemeinen (soweit notwendig) zwischen Eruptivgesteinen, metamorphen Gesteinen und Sedimenten unterschieden mit Ausnahme der penninischen Region, welche in Deckengesteine, sedimentäre Muldengesteine und basische Eruptiva gegliedert wurde. Die Zuordnung mancher Gesteine bleibt natürlich strittig. Innerhalb der Unterabschnitte wurden die Analysen wiederum von Westen nach Osten angeordnet. Die nach den geologischen Einheiten gesonderte Numerierung der Analysen setzt diejenige von Lieferung 20 fort.

Für jede Analyse sind aufgeführt die Gewichtsprozente (halbfett), die Molekularwerte nach Niggli (kursiv) und, neu gegenüber den früheren Zusammenstellungen, die Kationenprozente „Ein - Kation molekulare Einheiten“ nach Eskola \*), welche sich für viele Betrachtungen als vorteilhaft erwiesen haben. Die Molekularwerte nach Niggli und die Kationenprozente wurden durchweg neu berechnet; nicht selten ergaben sich dabei Abweichungen gegenüber den bereits publizierten Berechnungen der Autoren. Die Analysen entstammen mit wenig Ausnahmen den Laboratorien der Mineralogisch-Petrographischen Institute der Universitäten von Basel (Ba.), Bern (Be.), Genève (Ge.) und der Eidgenössischen Technischen Hochschule in Zürich (Zü.). In der Kolonne «Quelle» findet sich die Literaturnummer des nach den geologischen Einheiten getrennten Verzeichnisses. Noch nicht publizierte Analysen wurden als «persönliche Mitteilungen» des Bearbeiters verzeichnet. Die Schreibart der Fundortnamen erfolgte nach der Landeskarte, auch da wo vom Autor noch die Schreibweise des Topographischen Atlases benutzt wurde. Bei stärkerer Abweichung wurde die Schreibart des letzteren in Klammer beigefügt. Im allgemeinen sind die Nummern der Blätter der Landeskarte (L.) 1:50 000 angegeben, an erster Stelle die Nummer der «Kartenzusammensetzungen» (Nrn. zwischen 200 und 300), an zweiter Stelle diejenige der heute nicht mehr herausgegebenen «Normalblätter» (Nrn. zwischen 400 und 600). Sofern im Zeitpunkt der Zusammenstellung nur eine Ausführung erhältlich war, wurde nur diese angegeben. In einigen Fällen mußte die Nummer des Topographischen Atlases (T. A.) aufgeführt werden. Wo sich in den Originalarbeiten Koordinatenangaben der Fundpunkte (Koord.) finden, werden diese ebenfalls mitgeteilt.

Die Gesteinsbezeichnung folgt ganz den Angaben der Autoren. Der Mineralbestand wurde nur da angegeben, wo er vom Autor ausdrücklich für das analysierte Gestein verzeichnet ist. Dabei wurden, wo prozentuale Angaben fehlen, lediglich die wichtigeren Gemengteile an den Anfang, die unwichtigeren in eckige Klammer an den Schluß gesetzt. Eine runde Klammer hinter einem Mineral soll dieses näher erläutern (An-Gehalt bei Plagioklasen, Umwandlungerscheinungen). Selbstverständlich können alle diese Angaben in einer tabellarischen Zusammenstellung nur sehr summarisch sein; ein Eingehen auf die Literatur ist immer anzuraten.

## Teil B.

# Tabellarische Zusammenstellung der schweizerischen Mineralanalysen. 1942 bis 1954.

Die folgende Zusammenstellung enthält die mehr oder weniger vollständigen Analysen von im wesentlichen homogenen Mineralien, vorwiegend den Alpen entstammend. Die Anordnung erfolgte nach der chemischen Zusammensetzung, wobei die Silikate als weitaus wichtigste Gruppe an den Anfang gestellt wurden. Innerhalb einer Mineralart sind die Einzelanalysen von West nach Ost angeordnet. Die Analysen wurden ganz der Originalliteratur entsprechend abgedruckt. Wo keine Bestimmung von H<sub>2</sub>O — vorliegt, wurde das Gesamtwasser unter H<sub>2</sub>O+ aufgeführt. Ein Strich (—) bedeutet, daß auf das betreffende Element mit negativem Erfolg geprüft wurde. Alle Berechnungen von Molekularwerten sind unterblieben. Analysen aus schweizerischen Instituten sind unter dem Analytiker wie in Teil A vermerkt (siehe dort). Die Quellennummer bezieht sich auf das alphabetische Literaturverzeichnis am Schlusse. Die Fundortsbezeichnungen folgen den Literaturangaben, wobei auch hier allgemein die Schreibweise der Landeskarte angewandt wurde. Wie in Teil A sind die Blattnummern der Landeskarte angegeben. Viele Fundortangaben der Literatur sind sehr allgemein, offenbar weil die Autoren die untersuchten Mineralien Sammlungsbeständen entnommen hatten. Die Mineralbezeichnung folgt den Angaben des Autors. Die spärlichen optischen Bestimmungen an analysierten Mineralien wurden ebenfalls mitgeteilt.

## Silikate.

Anhang :

## Hinweise auf neuere Arbeiten mit wesentlichen chemischen Teilbestimmungen an Gesteinen und mit Daten über Spurenelemente (letztere teilweise nur halbquantitativ).

Die vielen Analysenangaben über Kohlen, Bitumina und nichtgesteinartige Erze (bzw. Gangmassen usw.) sind hier nicht berücksichtigt. Solche finden sich u. a. in den meisten diesen Stoffen gewidmeten Publikationen der Schweizerischen Geotechnischen Kommission, sowie in vielen Berichten des Bureaus für Bergbau (Verzeichnis in «Der schweizerische Bergbau während des Zweiten Weltkrieges», Bern 1947).

- Amstutz, G. Ch.** Geologie und Petrographie der Ergußgesteine im Verrucano des Glarner Freiberges. Publikationen der Stiftung «Vulkaninstitut I. Friedlaender» 5, 1954 (Bestimmungen von Spurenelementen).
- Bader, H.** Beitrag zur Kenntnis der Gesteine und Minerallagerstätten des Binnentals. Schweiz. Mineral. Petr. Mitt. 14, 1934 (Dolomitanalysen des Binnentals).
- Bader, H.** Untersuchungen an kalkarmen Sanden der nordschweizerischen Molasse. Schweiz. Mineral. Petr. Mitt. 16, 1936 (Kalk- und Dolomitgehalte).
- Blumer, M.** Zur Geochemie der Sedimentgesteine. Theoretische Untersuchungen sowie Spurenanalysen schweizerischer Gesteine. Diss. Univ. Basel 1949. — Helvet. Chim. Acta 33/I, 1950.
- Blumer, M., und Erlenmeyer, H.** Analysen schweizerischer Sedimentgesteine. Geochemische Untersuchungen II. Helvet. Chim. Acta 33/I, 1950 (Teilbestimmungen an zahlreichen Sedimenten aus Jura und Südalpen).

- Ramseyer, R.** Geologie des Wistenlacherberges und der Umgebung von Murten. *Ecl. Geol. Helv.* 45, 1952 (viele Karbonatgehalte von Molassegesteinen).
- Schmaßmann, H.** Stratigraphie des mittleren Doggers der Nordschweiz. *Tätigkeitsber. Naturf. Ges. Baselland*, 14. 1944 (viele Kalkgehalte).
- Schwander, H.** Bestimmung des relativen Sauerstoffisotopen-Verhältnisses in Silikatgesteinen und -mineralien. *Geochimica et Cosmochimica Acta* 4, Heft 6, 1953. Diss. Univ. Basel (Bestimmungen an verschiedenen schweiz. Vorkommen).
- Sigg, J., et von Steiger, R.** Contribution à l'étude des marnes bleues de la région d'Allschwil. *Bull. Soc. vaud Sc. nat.* 64, 1950.
- Stier, K.** Über das Vorkommen des Urans in schweizerischen Sedimentgesteinen. Diss. Univ. Basel 1950.
- Zweifel, H., und de Quervain, F.** Der Biotit-Apatitschiefer des P. Corandoni. — Anhang: Übersicht der untersuchten sedimentären Phosphatvorkommen der Schweiz. *Beitr. Geol. Schweiz, Geotechn. Serie* 32, 1954 (P-Gehalte verschiedener Gesteine aus Alpen und Jura).

Teilbestimmungen an Gesteinen werden natürlich ständig in großem Umfange durch die gesteinverarbeitende Industrie vorgenommen. Viele solcher Daten könnten für künftige geochemische Forschungen von großem Werte sein.

## Register der in den Tabellen (Teil A) vorkommenden Gesteinsgruppen.

### Eruptivgesteine

|  |                                    |
|--|------------------------------------|
| Aplite, Pegmatite . . . . .                                  | 13, 15, 17, 29, 33, 35, 37, 43, 63 |
| Diabase, Spilite, Variolite, Keratophyre . . . . .           | 27, 53, 57, 69, 73                 |
| Diorite, Gabbrodiorite . . . . .                             | 19, 27, 41, 51                     |
| Gabbros . . . . .  | 47, 49, 51, 53                     |
| «Ganggestein» . . . . .                                      | 29                                 |
| Granite . . . . .  | 7, 13, 27, 35, 37, 65, 69, 71, 73  |
| Hornblendite . . . . .                                       | 53, 63                             |
| Lamprophyre, basische Schlieren . . . . .                    | 13, 15, 27, 29                     |
| Peridotite . . . . .   | 49, 51                             |
| Porphyre, Porphyrite . . . . .                               | 13, 17, 27, 29                     |
| Quarzdiorite, Granodiorite, Tonalite . . . . .               | 17, 27, 29, 37, 63, 65, 69, 73     |
| Quarzporphyre, Granitporphyre, Felsite, Granophyre . . . . . | 7, 17, 27, 29, 43, 57, 73          |
| Syenite . . . . .  | 13, 69, 71                         |
| Vulkanische Tuffe . . . . .                                  | 61, 75                             |

### Metamorphe Gesteine

|   |  |
|---|--|
| Amphibolite, Hornblendeschiefer . . . . .                                       | 21, 25, 31, 33, 39, 41, 47, 49, 51, 59, 61                               |
| Anthophyllitschiefer . . . . .  | 51   |
| Arkose, geschiefert . . . . .   | 33   |
| Biotit-Apatitschiefer . . . . .   | 31   |
| Chloritschiefer, Grünschiefer, Prasinit, Epidot-Zoisitgesteine . . .            | 33, 35, 47, 49   |
| Eklogite . . . . .  | 51   |
| Glaukophangesteine . . . . .  | 47   |
| Glimmerschiefer, Gneise und Hornfelse mit Granat, Disthen, Staurolith . . . . . | 21, 35, 39, 41, 45   |
| Glimmerschiefer, Phyllite, Phylonite, ohne Tonerdesilikate . . .                | 23, 25, 31, 33, 35, 37, 45, 53, 59, 61                                   |
| Gneise aller Art, exkl. Typen mit Tonerdesilikaten . . . . .                    | 7, 9, 11, 19, 21, 23, 25, 31, 33, 35, 37, 39, 41, 43, 45, 57, 59, 61, 63 |
| Gneise und Hornfelse mit Andalusit, Cordierit, Sillimanit . . . . .             | 11, 25, 59, 61   |
| Jadeitit . . . . .  | 49   |
| Kalkphyllite . . . . .  | 45   |
| Kalksilikatgesteine, Skarne . . . . .   | 9, 11, 21  |
| Leptynite . . . . .   | 61   |

|  |           |
|--|-----------|
| Marmore . . . . .  | 45        |
| Mylonitschiefer, Ultramylonite, Rutschharnisch . . . . . | 9, 11, 19 |
| Quarzite . . . . .                                       | 35        |
| Talkschiefer, Talkgesteine . . . . .                     | 49        |

#### Sedimente

|  |                |
|--|----------------|
| Brekzien . . . . .                           | 67             |
| Dolomit . . . . .                            | 75             |
| Eisen- und Manganerze (sedimentär) . . . . . | 67, 69         |
| Leverrieritgestein . . . . .                 | 79             |
| Kalksteine . . . . .                         | 67, 77         |
| Kieselgesteine . . . . .                     | 53             |
| Lehm, Seeschlamm (quartär) . . . . .         | 79             |
| Mergel (mesozoisch, tertiär) . . . . .       | 75, 77         |
| Sandsteine, Sande . . . . .                  | 67, 69, 75, 77 |
| Tone (mesozoisch, tertiär) . . . . .         | 61, 75         |
| Tonschiefer . . . . .                        | 11, 67         |
| Vulkanische Tuffe . . . . .                  | 61, 75         |

#### Verschiedenes

|                                  |        |
|----------------------------------|--------|
| Meteorit . . . . .               | 79     |
| Mineralgänge, Erzgänge . . . . . | 25, 69 |
| Steinbeil . . . . .              | 79     |

---

## Register der analysierten Mineralien (Teil B).

|                          |        |                         |    |                           |    |
|--------------------------|--------|-------------------------|----|---------------------------|----|
| Adular . . . . .         | 85     | Forsterit . . . . .     | 91 | Piemontit . . . . .       | 89 |
| Albit . . . . .          | 85, 87 | Gastaldit . . . . .     | 91 | Plagioklas . . . . .      | 87 |
| Alkalifeldspat . . . . . | 85     | Granat . . . . .        | 91 | Prehnit . . . . .         | 87 |
| Anhydrit . . . . .       | 93     | Hornblende . . . . .    | 91 | Prochlorit . . . . .      | 89 |
| Ankerit . . . . .        | 95     | Kalzit . . . . .        | 95 | Pyrit . . . . .           | 97 |
| Apatit . . . . .         | 93     | Laumontit . . . . .     | 87 | Pyrochroit . . . . .      | 97 |
| Awaruit . . . . .        | 97     | Leverrierit . . . . .   | 89 | Rhodochrosit . . . . .    | 97 |
| Biotit . . . . .         | 87     | Löllingit . . . . .     | 97 | Rhodonit . . . . .        | 89 |
| Brandtit . . . . .       | 93     | Manganaxinit . . . . .  | 91 | Serpentinasbest . . . . . | 89 |
| Chamosit . . . . .       | 89     | Manganokalzit . . . . . | 95 | Siderit . . . . .         | 95 |
| Chlorit . . . . .        | 89     | Mikroklin . . . . .     | 85 | Stilpnomelan . . . . .    | 87 |
| Chloritoid . . . . .     | 87     | Muskowit . . . . .      | 87 | Talk . . . . .            | 89 |
| Chromit . . . . .        | 97     | Natrolith . . . . .     | 87 | Tinzenit . . . . .        | 91 |
| Cobaltocalzit . . . . .  | 97     | Orthoklas . . . . .     | 85 | Tremolitasbest . . . . .  | 89 |
| Desmin . . . . .         | 87     | Parsettensit . . . . .  | 89 | Wiserit . . . . .         | 97 |
| Diopsid . . . . .        | 91     | Phengit . . . . .       | 87 | Zinkblende . . . . .      | 97 |
| Epidot . . . . .         | 89     | Phlogopit . . . . .     | 87 |                           |    |
